/note="Organ: green seedlings; Vector: pAD-GAL4; Site_1:
ECORI; Site_2: xhoi; ds-cDNA molecules were generated as follows. First-strand cDNA was prepared from oligo-dr selected mRNA by prining with an xhoi oligo-dr primer. The resulting DNA:RNA hybrid was treated with RNase H and used as a template for DNA PolI-catalyzed second strand synthesis. After the addition of EcoRI adaptors; the resulting molecules were directionally cloned into the ECORI and Xhoi sites of the HybrizAP lambda vector
(Stratagene) and excised as RP thoras I others
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           96 ATGGCTTACTACCAGGAGGTGGACTACTGCTCGGAGGAGGTGAGGTCGGTGGCCCCGGCC 155

AI855425 539 bp mRNA linear EST 15-JUL-1999 603016F02.x1 603 - stressed root cDNA library from Wang/Bohnert lab
resulting molecules were directionally cloned into the EcoRI and NotI sites of the pT/T13PAC vector. The library then went through one round of normalization to CoT value of 5 based on the methods of Marcelo Bento Soares (Genome Research 6: 791-806, 1996)." I others

ALIGNMENTS

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

T49815
Telated to multifunctional cyclin-dependent kinase PHO85 [imported] - Neurospora crassa
N.Alternate names: protein B24H17.10
C;Species: Neurospora crassa
C;Species: Neurospora crassa
C;Accession: T49815
R;Schulte, U.; Aign, V.; Hoheisel, J.; Brandt, P.; Fartmann, B.; Holland, R.; Nyakatura, Bibmitted to the Protein Sequence Database, May 2000
A;Reference number: Z22022
A;Accession: T49815

transcription factor Brn-1 - mouse
N'Alternate names: class III POU domain protein brain-1
C'Species: Mus musculus (house mouse)
C'Date: 02-Dec-1993 #sequence_revision 01-Sep-1995 #text_change 22-Jun-1999
C'Accession: S31223
R'Hara, Y.; Rovescalli, A.C.; Kim, Y.; Nirenberg, M.
Proc. Natl. Acad. Sci. U.S.A. 89, 3280-3284, 1992
A;Title: Structure and evolution of four POU domain genes expressed in mouse brain. A;Reference number: S31223; MUD:9228768; PMID:1565620

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence 3, Sequence 5, Sequence 1, Sequence 1,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

TITLE OF INVENTION: Human Gene Sequence of the Down Syndrome Critical
Patent No. 6251664
TITLE OF INVENTION: Region of Human Chromosome 21, Coding for A Serine-
TITLE OF INVENTION: Threonine Protein Kinase (MNB), Expressed in the
TITLE OF INVENTION: Neuronal Regions Affected in Down Syndrome
CURRENT APPLICATION NUMBER: US/08/789,275A
CURRENT FILING DATE: 1997-01-28
NUMBER OF SEO ID NOS: 6
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Query Match

Sequence 26, Application US/08137614A

Septent No. 5487976

GENERAL INFORMATION:
APPLICANT: Soderlund, David M.
APPLICANT: Milpple, Douglas C.
APPLICANT: Henderson, Joseph E.
TITLE OF INVENTION: Gene Encoding An Insect
TITLE OF INVENTION: Gamma-Aminobutyric Acid (GABA) Receptor Subunit NUMBER OF SEQUENCES: 31
CORRESPONDENCE ADDRESS:
ADDRESSE: ALXON, HAIGTAVE, DEVANS & DOYLE
                                                                                                                                                                                                                                                                                                                                                                                          DB 4; Length 312;

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | Sinos2/godata/geneseq/geneseqp-embl/AA1980_DAT:*

The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New isolated nucleic acid detection reagent for detecting 1000 or more genes from brosophila and for elucidating cell signalling and cell-cell interactions -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL16175) and the encoded proteins

                                                                                                                                                                                                                                                                                                                                                           The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention is useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL016175) and the encoded proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       7 VDYCSEEVRSVAPAGFGRHGGGVQ---QHVVKEKFEEVDTVSRAGANHHHHHGHHGGHGF 63
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            46 VKVISEE-----AGHGGWAGGYSGGYAH-APEEVKIVKVISEAGHSHCHDYGHSHGHGS 98
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      sequences (ABLO1840-ABL16175) and the encoded proteins (ABB57737-ABB72072).
The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                     New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signalling and cell-cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       10;

The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention is useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           21 GFGRHGGGVQQHVVKEKFEEVDTVSRAGANHH-------HHHGHHGGHGFVVRETR 69
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA Sequences (ABL16175) and the encoded proteins (ABB7737-ABB72072).

The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Ryk protein; anglogenesis; variant; receptor tyrosine kinase; cytostatic; antidiabetic; ophthalmological; cardiant; vulnerary; antianglogenic; gene therapy; fusion protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       encoding the protein and expressing the protein in vivo. (I) is used as an immunogen to produce an antibody against it. The antibodies are useful for modulating angiogenesis at a site. Polynucleotides encoding (I) is useful in gene therapy technique for treating above mentioned medical conditions. The present sequence represents the scrv 1b4 antibody
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to modulating anglogenesis at a site by supplying a composition comprising a variant Ryk protein (I) (a member of the receptor tyrosine kinese family), or modulating formation of calls into capillary-like structures by contacting the calls with a composition comprising (I). The method is useful modulating anglogenesis at a site (endothelia) cells of human origin) into capillary-like structure. The condition e.g. cancer, metastasis, diabetic retinopathy, macular condition e.g. cancer, metastasis, diabetic retinopathy, macular condition involving anglogenesis in the reproductive system, including protein is supplied to the individual an individual. The variant production is supplied to the individual as a source of polynocleotide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Modulating anglogenesis at a site, for treating or preventing cancer, metastasis, diabetic retinopathy, cardiovascular disease, wound by supplying composition comprising variant Ryk protein to the site

The present invention relates to the isolation of novel human proteases, and the nucleic acids encoding them. The sequences of the invention are useful for treating diseases and disorders such as cancers (e.g. breast, colon, lung), immune-related diseases and disorders (e.g. inflammatory diseases and asthma), cardiovascular diseases (e.g. restenosis and coronary thrombosis), brain or neuronal-associated diseases, metabolic disorders (e.g. diabetes, obesity), inflammatory disorders (e.g. rheumatord arthritis and psorlasis), central or peripheral nervous system diseases, migraines, pain, sexual dysfunction, hypertension, psychotic disorders, neurological disorders, hypotension, hypertension, psychotic disorders, neurological disorders (e.g. Alzheimer's disease, Parkinson's disease) and dyskinesias.

The nucleic acids and polypeptides are also useful for treating viral

(I) is useful as an immunoassay reagant for determining the presence and/or amount of CMV antibodies or antigens, especially for diagnosis of primary or secondary CMV infections or for detecting reactivation of cMV after minon amples, especially for diagnosis of primary or latency. (I) is a more specific and sensitive immunoassay reagent than monomeric CMV p52 antigen.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  This invention describes a novel multimeric cytomegalovirus (CMV) antigen
infections caused by human immunodeficiency virus (HIV), and non-viral infections such as ocular disease (e.g. glaucoma) and macular degeneration. AAU82702-AAU82760 represent the novel human proteases of the invention.
                                                                                                                                           Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Multimeric cytomegalovirus antigen useful as an immunoassay reagent, and which comprises at least two p52 peptide sequences
                                                                                                                                                                                                                                                                                                                                                                                       CMV-p52 antigen; multimeric; immunoassay; IgM; immunoglobulin M; diagnosis; infection; reactivation.

Sequence 1, Application US/08476519
Patent No. 5750876
GENERAL INFORMATION:
APPLICANT: Barry, Gerard F.
APPLICANT: Kishore, Ganesh M.
APPLICANT: Krohn, Bradley M.
TITLE OF INVENTION: No. 5750876e1 Isoamylase Gene, Compositions
TITLE OF INVENTION: Containing It and Methods of Using Isoamylases
NUMBER OF SEQUENCES: 11
CORRESPONDENCE ADDRESS: ADDRESSE: Grace L. Bonner, Monsanto Company, BB4F
STREET: 700 Chesterfield Parkway No. 5750876th
STREET: AL Louis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Length 2334;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Indels
                                                                                                                                                                                                                                                                                                                                                                                                                                                            SOFTWARE: Patentin Release #1.0, Version #1.25
